DETAILED OFFICE ACTION

Drawings

The drawings, filed on 2/22/06, are accepted.

Examiner's Amendment

An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Please change the following:

In the Specification:

On page 9, in the last line, change [Fig. 9] Fig. 9 to **–[Fig. 9A-9B] Fig. 9A-9B—**

On page 10, in line 20, change [Fig. 17] Fig. 17 to **–[Fig. 17A-17B] Fig. 17A-17B—**

In the claim:

In claim 1, line 3, change “*return passes*” to **–a plurality of return passes respectively–**

In claim 2, line 3, change “*return passes*” to **–a plurality of return passes respectively–**

The above Examiner's amendment is only for the purpose of claimed language clarification. Instead of the term “return passes” (i.e., since passes is written in plural form, the

Art Unit: 2834

phrase “return passes” indicates plural return passes), it should clearly written as “a plurality of return passes” in order to avoid any unclear or indefinite issue(s) with respect to 35USC112, 2nd paragraph.

Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312.

Allowable Subject Matter

Claims 1-14 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: in combination with other limitations recited in the claims, the primary reason for the allowance is the including the following inventive features of a claw pole motor stator, comprising **2m sets of teeth and 2m-1 of slots disposed alternately in an axial direction (m being a natural number of 2 or more), a plurality of return passes interconnecting the teeth, and windings accommodated in the slots, respectively, the windings each accommodated in the slots spaced apart by m from each other being connected in line, so that exciting directions are opposite from each other, and the phases of magnetic fluxes passed through the teeth being displaced by 360degree/N (N=2m) from one another, as in claim 1; or,**

a claw pole motor stator, comprising 2m+1 sets of teeth and 2m slots disposed alternately in an axial direction (m being a natural number of 2 or more), return passes interconnecting the teeth, and windings accommodated in the slots, respectively, the windings each accommodated in the slots spaced apart by m from each other being connected in line, so that exciting directions are opposite from each other, the phases of magnetic fluxes passed through the teeth being displaced by 360degree/N (N=2m) from one another, and magnetic fluxes passed through first one of the teeth and 2m+1-th one of the teeth being 2/1 of those passed through the other teeth at the same phase, as in claim 2.

Art Unit: 2834

Comparing to the prior-art of the record, the cited references individually disclose claw-pole stators having intermeshing claw poles and slots defined there between for accommodating the stator windings. However, none of the prior art references of the record, either stand-alone or in combination, has taught or suggest the above-mentioned features (as indicated by the above bolded-font section) in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
